Total Home WiFi: The Backbone of a Connected Community

At Blue Stream Fiber, we take pride in delivering a whole-home WiFi service rated as the best by independent technology authorities like Ars Technica and Forbes. We also provide a true mesh network with built-in security at no additional charge - stopping on average over 100k security threats per customer every year. Below are some important elements often left unclear that make the difference between a standard experience and a true Total Home WiFi experience.

Wall-to-Wall Coverage

A fully optimized wireless home network that adapts to your community's needs, delivering seamless internet throughout every home.

> **ALERT!** Did you know some providers will only provide one or two router(s) or access point(s)? This means that if you need more speed or coverage, you and your residents will need to pay extra

Unmatched Speed

Gigabit speeds that power every device, from streaming and gaming to smart-home technology.

> **TIP!** To ensure that you have the best speeds and performance a WiFi system must have a fully dedicated backhaul (connection between pods). Many systems split the connection between the Wireless devices resulting in a subpar experience. If your technology does this, it isn't a true whole-home experience.

Ease of Use

To manage devices, set parental controls, and create guest access with a simple-to-use app.

Built-In Security

Make sure that your devices are protected with security included in your internet pricing.

> **TIP!** Many providers charge extra for security or only provide partial protection. Ask all providers to detail exactly what they cover and what they charge. Be careful of hidden upcharges to get full protection.

Optimized and always reliable

We are continuously optimizing our network 24/7/365 eliminating spinning circles and a consistent experience on every device on your network.

Our WiFi had been out with our previous provider for 5 days and we made the switch to Blue Stream instead of waiting on continued poor service / delay or fixes on the previous provider's side. In less than 12 hours, we were fully operational with faster speeds than we ever saw with our previous provider, including fast WiFi on our patio and driveway. The WiFi has been excellent for two full-time WFH employees, and for multiple devices. Thank you, Blue Stream.
